SUMMARY

Cybersecurity Engineer with a background in Software Engineering and experience contributing to PharmaChain, a blockchain-based graduation project designed to help detect counterfeit medicines across the pharmaceutical supply chain. Gained practical experience in application development, databases, and secure system design through academic projects, along with training through the National Cyber Security Center's Masar program. Seeking an entry-level cybersecurity role in Amman where I can apply my skills to build reliable, secure software that solves real-world problems.

SKILLS

Programming Languages: C++, Python, JavaScript
Web & Backend: HTML, CSS, ASP.NET Core
Databases: SQL
Tools: Git, GitHub, Linux (command line)
Security: Nmap, Wireshark, Cisco Packet Tracer, FTK Imager, Autopsy
Soft Skills: Problem-Solving, Teamwork, Communication

PROJECTS

PharmaChain — Blockchain-Based Pharmaceutical Traceability Platform

- Developed a blockchain-based platform to help detect counterfeit medicines through QR code verification and end-to-end pharmaceutical traceability.
- Enabled pharmacists to verify product authenticity and trace medicine batches across the supply chain, improving transparency.
- Implemented Proof-of-Work, HMAC-SHA256 verification, JWT authentication, and role-based access control to support transaction integrity and secure access.
- Led a team of 4, coordinating task distribution and sprint planning to deliver project milestones.

Digital Forensics — Disk Imaging & File Recovery

- Created forensic disk images using FTK Imager and verified evidence integrity with MD5/SHA1 hashes.
- Recovered deleted files using Autopsy and analyzed activity timelines on NTFS file systems.

Linux Server Deployment & Penetration Testing

- Deployed Drupal on Ubuntu Server using Apache2 and MariaDB, and configured UFW firewall rules.
- Conducted reconnaissance using Nmap, WhatWeb, and DIRB to identify open services, technologies, and directories.

Other Academic Projects

- **Network Security:** Practiced SSH configuration, port security, DHCP snooping, and ASA firewall configuration using Cisco Packet Tracer.
- **Database Design:** Designed a normalized relational database using SQL, focusing on data integrity and query optimization.
- **Malware Analysis:** Performed basic static and dynamic analysis to identify suspicious behavior and potential mitigations.

EDUCATION

B.Sc. in Cybersecurity — Tafila Technical University Oct 2022 – Jun 2026
Department of Cyber Security · GPA: Very Good

TRAINING & CERTIFICATIONS

Amman 42 — Cybersecurity Training Oct 2026 – Dec 2026

- Ongoing practical training in web application vulnerability identification and analysis, Linux command-line operations, and cryptography, alongside web development exercises.

Masar Cybersecurity Training — National Cyber Security Center (NCSC) 2025 | 200 hrs

- Intensive training in SOC operations, threat analysis, cyber defense, network security tools, and risk management.

Robotics Trainer Prep Course (STEM) — ROBOTNA Feb – Mar 2026 | 55 hrs

- STEM-accredited trainer preparation covering robotics fundamentals and educational methodologies.

Self-Study: Malware Analysis, C++ Programming
